

Feature & Specification

- Disregarding relevant battery's capacity it can operates its excellent function at either slow charge or quick charge.
- It is installed the precise electric sensor in order to prevent from electric current's overload.
- It adjusts the time with its timer depending on battery charger.
- This charger has been given the function is able to directly start a car.
- It can charge to sixteen units of auto battery at the same time.
- Input Voltage Single phase 220V 50-60Hz, 12KVA
- Output Voltage 12~24V DC 400A
- Rectification SCR type

*Note. Image, specification and model No. of equipment can be changed by manufacturing process without special reporting.
