Colour Pattern Generator

Scientech 2670 (New) Colour pattern Generator is designed for educational and service use. 14 Test patterns normally required for monochrome & colour TV installations can be easily selected. Scientech 2670 (New) generates patterns and multicolour bars. Patterns provide video and RF modulated signals for alignment. Colour bars are used for colour settings. Horizontal line, vertical line & circle patterns are used for Raster, Geometrically and Linearly adjustments. White pattern is used for white balancing. Scientech 2670 provides fixed composite video signals which helps the students for easy analysis.

Video carrier
▶ Lower VHF band I : 41-68 MHz
▶ Upper VHF band III : 174-230 MHz

RF output
> 100 mV p-p (75 Ohm impedance)
All patterns are available modulated on IF carrier. The 38.9MHz is crystal derived. This is extremely useful for color adjustments.
